

MEMORANDUM

DATE: May 11, 1993

TO: Division of Shellfish Sanitation Staff

THROUGH: Eric H. Bartsch, P.E., Director
Office of Water Programs

FROM: Robert E. Croonenberghs, Ph.D., Director
Division of Shellfish Sanitation

SUBJECT: Shoreline Survey - Policy - Areas Scheduled to be Sewered

Delete Working Memo #174

When preparing to conduct a shoreline survey in an area served by a sewage treatment facility, the extent of the sewered portion must be determined by contacting the appropriate public works authority. Should you be informed that an area is to be sewered within six months, inquire what the requirements for hookup will be.

- If all properties will be required to be hooked up to the sewerage system within six months of completion, the area does not have to be surveyed.
- If hookup is permitted to be delayed until there is a malfunction of the onsite system, the area shall be surveyed to assure that all deficient properties are identified promptly.

If there are a few unsewered properties within an existing "sewered" area, contact the public works authority for their locations and survey them. If the Field Director, or Shoreline Survey Supervisor, whichever case applies, determines that the effort in time required is unreasonable and that the location on the watershed is not critical, the entire area may be considered to be sewered.
